Space & Naval Warfare Systems Command Awards Contract

SAN DIEGO – The Space and Naval Warfare Systems Command has awarded two firm, fixed price delivery orders for four Digital Modular Radios and supporting power amplifiers at a total price of \$2,854,200 to Motorola, Inc., Space and Systems Technology Group, of Scottsdale, Ariz., and \$2,849,888 to Raytheon Intelligence & Communications Systems Division, St. Petersburg, Fla. These radio systems will be used to evaluate and select a single supplier of Digital Modular Radios via an Indefinite-Delivery, Indefinite-Quantity delivery order contract. Delivery orders to be placed against this contract over four years are expected to bring the total cumulative value to approximately \$368,000,000.

DMR is a non-developmental, software re-programmable radio, composed largely of off-the-shelf components, that will meet the Navy's near-term requirements for High-Frequency, Very High-Frequency, and Ultra High-Frequency radio communications until the Defense Department's Joint Tactical Radio System becomes available.

Work will be performed at contractor locations in Scottsdale and St. Petersburg, respectively. The first three DMRs are scheduled for delivery March 31, 1999; the fourth is scheduled for August 31, 1999. Contract funds will not expire at the end of the current fiscal year. This contract was competitively procured. The solicitation was published on the WorldWide Web, and three offers were received. The Space & Naval Warfare Systems Command is the contracting activity (N00039-98-D-0029).
